

SaltDNA is a secure mobile communications platform built for customers requiring total control and complete privacy.

ENCRYPTED VOICE AND TEXT

All communications on mobile devices and from the desktop, are secure and private.

CENTRALIZED MANAGEMENT

Ability to provision and de-provision instantaneously from anywhere in the world.

SECURE COLLABORATION

Conference calling and group messaging allow the enterprise team to collaborate on confidential matters securely.

CLOSED CONTACTS

Authorized contacts are part of a closed group within the SaltDNA app and aren't linked to the device's personal contacts.

SECURE AUDIO AND FILE TRANSFER

Access and send sensitive documentation and information on the move.

CONFERENCE CALLS

We pride ourselves on quality voice conferencing allowing up to 15 participants at any one time.

BROADCASTING

Available as a hosted service or as an on-premise installation within private infrastructure.

DEPLOYMENT OPTIONS

Available as a hosted service or as an on-premise installation within private infrastructure.

REPORTS AND ANALYTICS

Ability to monitor communication usage including individual data.

ACCOUNTABILITY AND COMPLIANCE

Complete, centralized control over which communications are archived for accountability and regulatory compliance.
